

IT'S
CONNECTED CONFERENCE

THE COMPLETE **CONFERENCE SOLUTION**

Connected Conference is an extremely flexible and powerful software suite for conference and discussion systems. From **preparing** your meeting to **live webcasting** and **publication** of the meetings on the internet.

THE **SOLUTION** FOR:

Connected Conference is the ideal solution for every organization looking for an always-fit Conference solution. This means you will receive the best possible layout without all the possibilities you don't need or want. You don't need to work around the software, the software will work around you!

City Councils

Court Rooms

Parliaments

Enterprises/Board rooms

House of Worship

SOUNDS **FAMILIAR?**

Are you looking for an easy way to prepare your meetings? Without having to learn different kinds of software? One control user interface instead of multiple screens?

With Connected Conference you can easily prepare your meeting in a simple Excel file. This is the foundation of the complete automatic chain.

Would you like to manage your meeting in a user-friendly way? Do you now have problems with empty seats or maybe switched seats? Do you need to keep track of the speech time and be able to start and manage polls or voting?

Connected Conference makes it easy! The 'drag and drop' function allows you to replace attendees to the correct seat with ease. Connected Conference also has a user-friendly interface which allows you to manage your meeting from just a tablet or PC.

With Connected Conference you can check and edit a produced clip, publish it or stream the meeting live and when you're done, the meeting can be archived.

**FULL AUTOMATIC,
EASY CONTROL, FROM PREPARATION TO PUBLISHING**

FLEXIBLE AND EASY TO USE

One interface. One workflow. One easy way of preparing and controlling your meetings and conferences. Connected Conference is an **automatic chain**, with manual overrides options.

FOR THE SECRETARY, CHAIRMAN AND MORE

When a secretary (or someone else) is desired, Cmeets allows them to simply prepare a meeting in Excel. Meeting data, such as delegate's name and agenda are easily controlled from a tablet or PC. The agenda, delegates, cameras, microphones, voting results, presentations, recording and web streaming are all controlled from one simple interface.

It is possible to show picture in picture, picture next to picture, switch between public and confidential, video overlaying and automatic camera control.

The interface is straightforward and very simple to use! Once you've filled in the Excel, the rest will follow automatically.

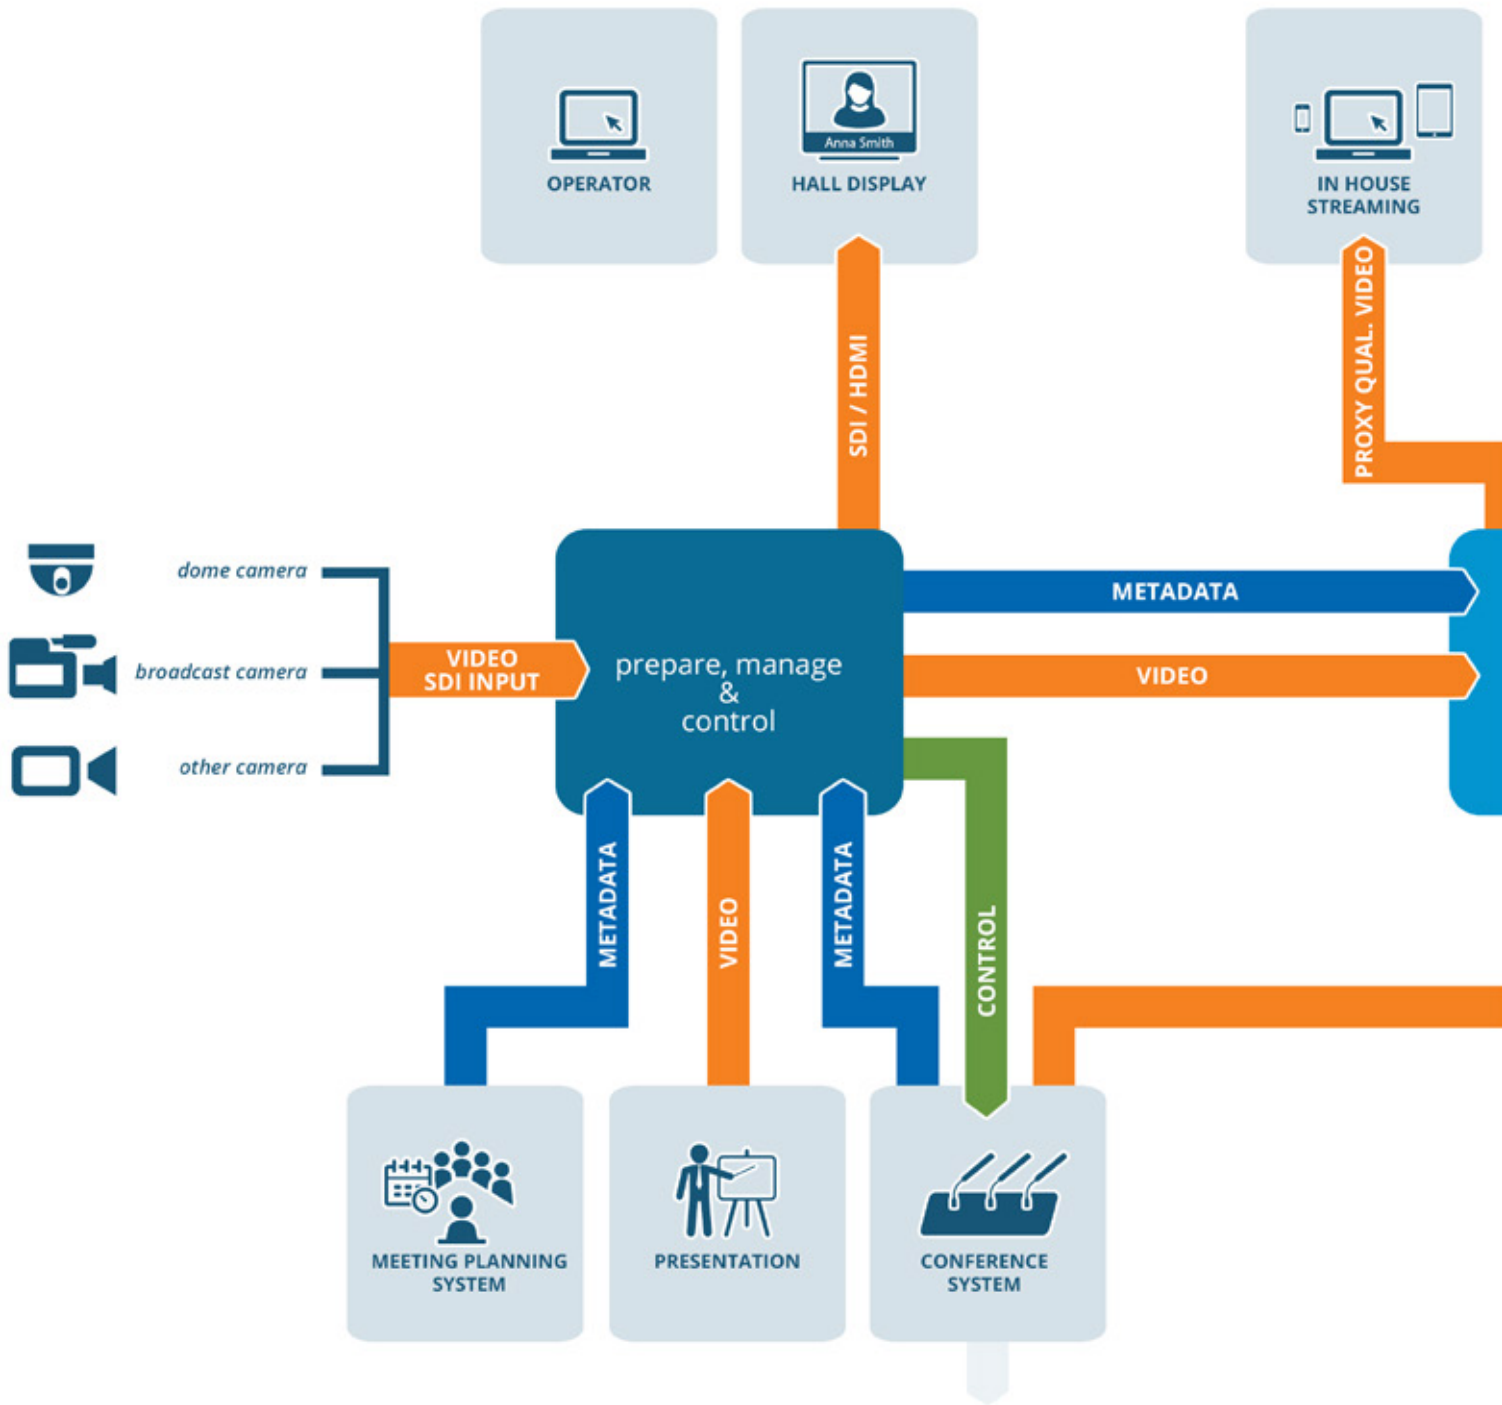

AUTOMATIC CAMERA CONTROL

Control the video cameras manually or let the system automatically zoom in and turn to the active speaker. No additional video mixer is needed!

VIDEO OVERLAYING

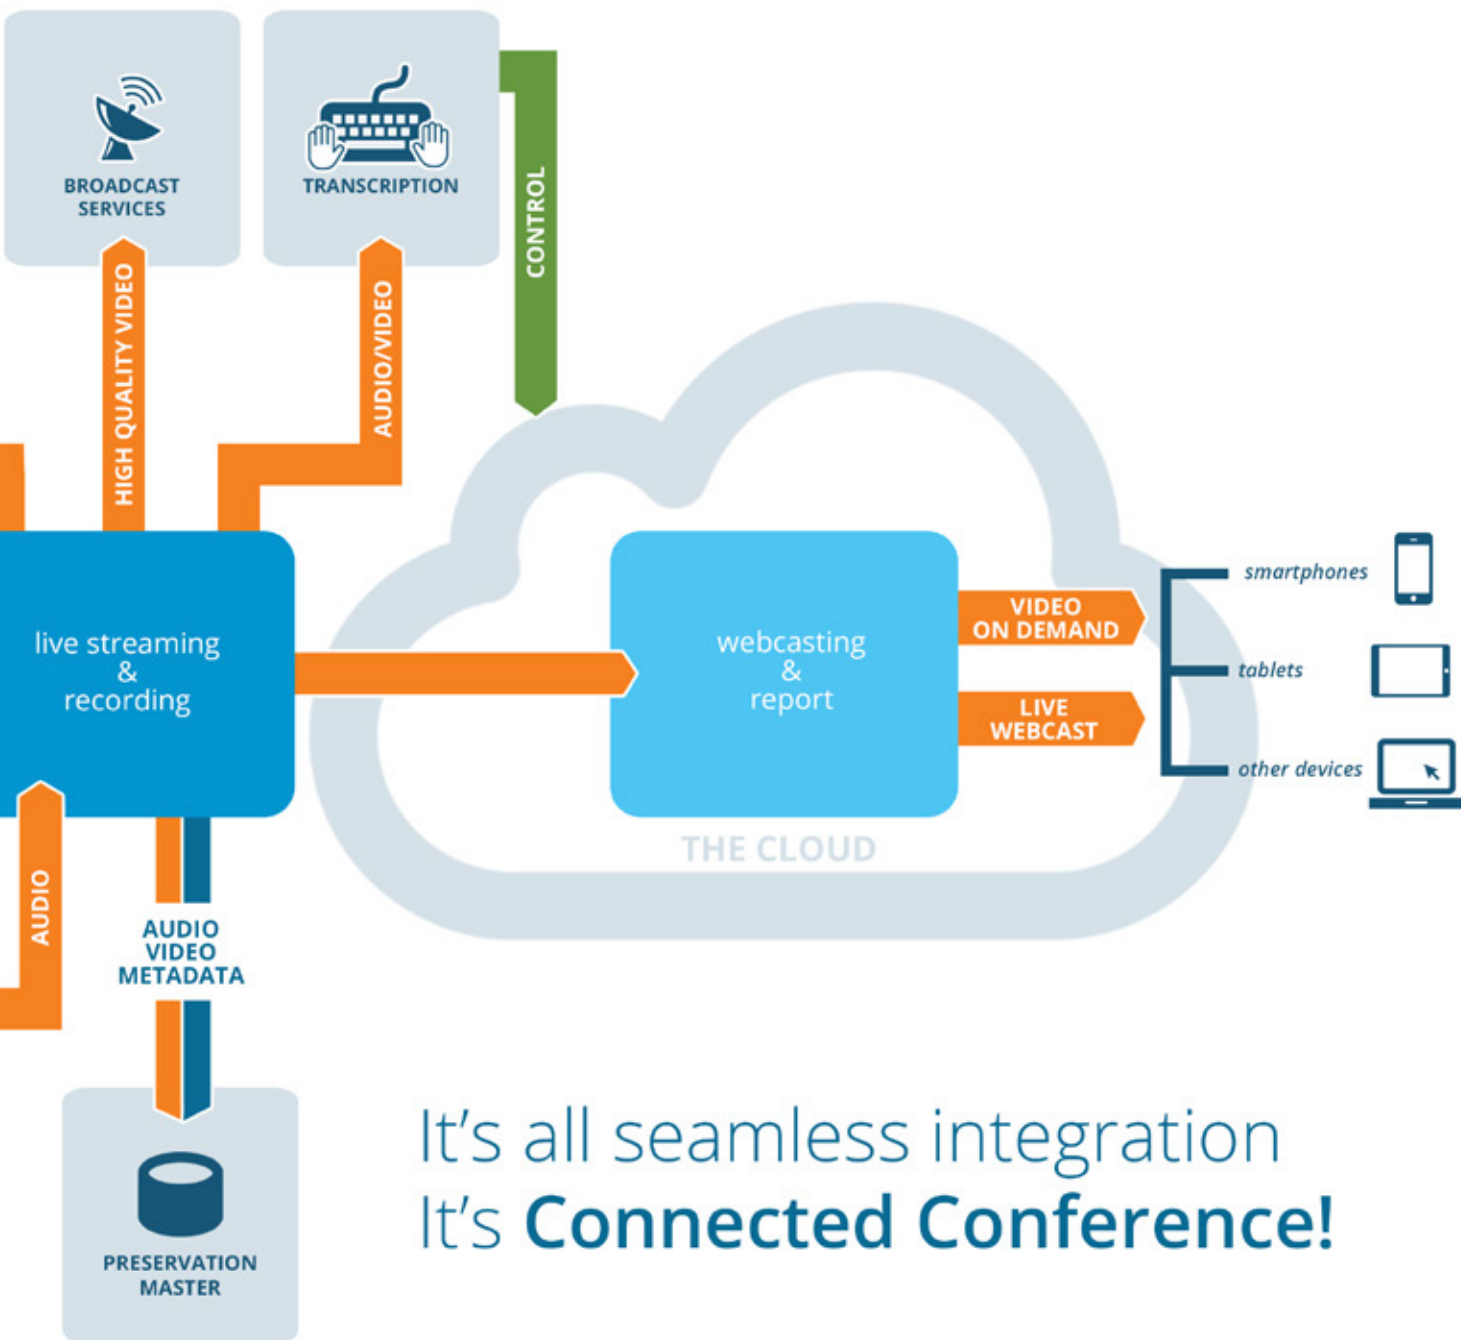

Multiple video overlay functionalities are supported simultaneously. When there are two delegates speaking simultaneously, the system will automatically crop both video feeds and put them into a split-screen. You can easily show the name, party and other information layered on the video signal.

We can support

It's all seamless integration
 It's **Connected Conference!**

 ■ METADATA
 ■ CONTROL

SEAMLESS INTEGRATION

One seamless integration: Prepare and control, recording, live streaming and website publication in one easy workflow. **It's Connected Conference!**

IN-HOUSE USERS

For the in-house users it is important to have reliable encoding, recording and live streaming, for editing, review and search when needed. LogDepot, as part of Connected Conference, captures audio and video feeds from your meeting rooms. It creates the live streams you need for webcasting and records all the formats you desire, for transcription, web publication, archiving and broadcast services. At the same time it will automatically capture all relevant metadata, such as speaker names and agenda items. Designed for multi-lingual operation, creating live streams and Video-on-Demand files can easily be done for each language individually. Automatic 24/7 recording means the system is always recording and you will never miss a meeting.

After recording, review the meeting and prepare for publishing by correcting possible errors and fine tuning data. Publish the recorded content to a website, an internal network or portal or long-term archive. Browsing through the material and searching for specific items and/or fragments is easy by searching the metadata information.

LogDepot offers the functionalities for each department within the in-house users, such as broadcast services, web services, archiving and other departments.

EASY CONTROL, FROM PREPARATION TO PUBLISHING

LIVE AND ON DEMAND

ConnectedViews as part of **Connected Conference** is your live streaming and video-on-demand sharing platform

PUBLIC INVOLVEMENT

Our last piece of the puzzle is the in the cloud (or your local private cloud) video-on-demand and live streaming service. As an organization you want to create more public involvement and this is possible with ConnectedViews. Due to it's seamless integration, you can create a live stream by clicking the button directly in the Cmeets interface or let it happen automatically.

The end-user will see the live stream with metadata in the ConnectedViews portal. It's also possible to publish video-on-demand.

After the in-house users have fine tuned the conference or meeting, it's ready for publishing. This can happen automatically or once the clip is approved.

ConnectedViews is multi browser, multi device compatible. It will provide the end-user with the best viewing and playback experience. It enables you to share content with public and private users just by exporting a clip from LogDepot. Share content via Social Media and stream one or many different live channels coming from any room. You can also add documents to time stamped metadata subjects.

ConnectedViews offers multi-lingual user interfaces, multi-lingual audio tracks (translation channels) and multi-lingual metadata possibilities, all from one portal!
