PowerPoint Capturing

Logging PowerPoint Presentations in Real-Time with LogDepot Presentations

Do you have the need or wish to **publish presentations**? Do you need to archive presentations? Do you want to capture a presentation for later review, quick publication on Internet or historical archiving? Of course, you do!

But you don't have the resources to spend a lot of time for this purpose? Arbor Media LogDepot is the solution to this problem. The well-known LogDepot system covers the needs to record the audio and video of any presentation, including simultaneous translations if this is required. And with the LogDepot Presentations module you can now also **record the PowerPoint sheets** and information with minimal effort!

PowerPoint Capture

The LogDepot Presentations Module is an easy to use extension to the LogDepot Product family. Apart from the existing possibility to make a video recording of a presentation, this module will automatically record the PowerPoint presentation. The system will record each sheet as an individual picture and text on the sheets as textual metadata. The sheets are time-stamped upon recording so that they can be synchronized with video recording automatically.

Easy to use

Arbor Media's intention was to make this as easy as possible for the end user. The presenter inserts the Arbor Media LogDepot Presentations USB-stick into any laptop running the Microsoft PowerPoint and his or her presentation is being recorded. It's that easy!

The software will **not be installed** on the notebook: when the presentation is finished, the user can simply pull out the USB-stick and use the PowerPoint Export Module to transfer the information to the archive or website, depending on your requirements. The Export Module will export the sheets as JPG pictures and the metadata (titles and texts of the sheets) in XML files.

Publish on-the-fly with a fixed installation

Apart from the use on a USB-Stick (as described above), the module can be installed on a fixed Presentation PC, depending on the requirements. When used in a fixed environment, the export or online publication can take place on-the-fly.

Highlights

- PowerPoint Capture - Recording your PowerPoint presentations
- Quick capturing and publication of your presentations
- No installation, just insert the LogDepot Presentations USB-stick
- Easily integrate with LogDepot resulting in full automatic capture of your valuable presentations

DebateView

Video on Demand

Automatic Debate Publisher

Arbor Media realized a system for **recording and internet publication** of public debates. Most parliaments only provide a live stream of the ongoing debate, but with DebateView it is now possible to watch the debate afterwards, at any time, by anybody, and from any location with an Internet connection. When the debate is ongoing, clerks present at the debate provide real-time metadata (i.e. speaker and breaks).

Accessible for anybody

A debate can take a long time, even multiple days. Publishing the complete debate at once will take a few hours and is not desired. With DebateView the debate is published in phases; whenever there is a break, the part from the start (or previous break) until this break is published instantly. This way, debate video is available as soon as possible, creating some highly added value! When published, the debate can be accessed not only by the parliament employees, but also by the audience. **Everybody who is interested can access debate recordings!**

MPs can access the part before the break to look back to what is said by whom. The most recent debates are listed at the top for actuality. When watching a debate, navigation in the video based on metadata is possible.

Searching by metadata

A debate can take multiple hours thus searching a specific interesting part will take too long. Therefore, next to the player, metadata is listed upon which can be navigated. Just click on the specific metadata item (e.g. speaker) and the player jumps to that moment in the debate. The number of published debates grows fast thus search functionality on the metadata (most important are the subject and the debate-speakers) is provided.

When searching e.g. for a speaker, the search results show all the debates that this person spoke on. Also, when a speaker speaks multiple times in a single debate, all his/her speaking moments are shown. Actually, the search results contain a part of the metadata normally listed parallel to the debate video player. Clicking a search result will instantly start playing the debate from that moment.

In short: A very powerful service by the parliament; to MPs, internal employees and the broader public!

Application Note

AVEO transcription player

The ideal transcription tool

The AVEO transcription player is a versatile media player, playing audio and video files, but it also offers users a variety of other extra features; such as the special keyboard hook functions in

combination with a time-stretch function, turning it into an extremely useful transcription tool.

Special functions also operate when the focus is set on to another window; for example when a text editor is on the foreground. The AVEO player even can be controlled by an external footswitch. This makes the AVEO player very suitable for transcription work.

Shortcuts

The following functions (among others) can be bound to the keyboard of the external device:

- Play, play/pause
- Pause
- Stop
- (Fast) forward/rewind
- Increase/decrease speed
- Open (LogDepot) file
- Open time stretch properties
- Increase/Decrease volume
- Jump to next/previous hour

Direct access to LogDepot archives

The AVEO player can connect to a LogDepot stream by pushing a single button. The user can play out the audio or video files, just by clicking the right date and time.

The AVEO player can play out Windows Media Audio and Video files. Depending on the codecs installed, the system can also play out other audio or video formats such as WAV, MPEG2 and MP3.

External devices

The user can easily switch between hour files by hitting the predefined **keypad** or **footswitch**. Any of these shortcuts can be changed with only a few actions.

Highlights

- Control by foot-switch or keyboard hooks (short cuts)
- Invisible operation if desired
- Variable speeds 50% - 200%
- Direct interaction with LogDepot
- Suitable for stand-alone use
- Easy, unattended installation
- History list of recently used files
- Supports multiple active instances
- Supports command line parameters for a custom start/stop

Eplayer (DVD production)

Your multi-lingual meeting or conference on one DVD

The Eplayer is a handy tool, provided free of charge to all users of the Arbor CD/DVD Robot software. It allows conference organizations to store a conference with one video and many interpreter-audio channels on a DVD, together with the metadata, containing information about the conference, such as speaker names, agenda items and more.

When the Eplayer is burned on a DVD, together with the conference data, it will automatically pop-up when the DVD is inserted into a PC, making it extremely simple to use.

The Eplayer looks are fully "skinnable" allowing an organization to match her corporate identity or even tailor the looks to match the image of a specific event.

The Eplayer can be used with Data CD, Data DVD, USB Stick or any other PC medium.

CD/DVD Production

Burn professional CD/DVD/Blu-ray Discs with LogDepot

For the automatic production of CD/DVD's Arbor Media cooperates with market leader Rimage Corporation. Rimage is a pioneer and innovator in CD, DVD, and Blu-ray Disc™ production technology.

The CD/DVD Robot module allows production of Data CD, Data DVD, Audio CD and Video DVD.

The Rimage products usually have multiple input bins to support mixed media burning and printing.

General advantages of using CD/DVD production include:

- **Cost Saving:** Creating Audio and Video CD/DVD's with a few mouse clicks saves an enormous amount of time and costs
- **Corporate Identity:** All produced CD/DVDs have a professional look
- **Automatic logging of CD/DVD production** (who produced which Disc and when)
- **Eplayer Application** available for reproduction – free of charge!

Application Note

ARBOR MEDIA
BROADCAST & CONFERENCE APPLICATIONS

Conference organizations have various applications for CD/DVD production:

Visitor service

A LogDepot with CD/DVD production system allows easy and affordable production of small quantities with customized professional CD/DVDs. With a few mouse-clicks, a whole meeting can be burned on DVD, including all metadata such as Room, Meeting Title, Speaker names and including interpreted recordings in many languages, if available.

And it is no longer an (expensive) technical task; everyone can do the job!

Archiving

Automatic storage of audio/video content on CD/DVD may provide a low-cost easy to maintain and use audio/video archive: Depending on various parameters, it is possible to burn a whole conference, including video and multiple audio channels on one DVD or Blu-ray disk.

Arbor media provides a free Eplayer application, that can be burned with each DVD, so that the DVD not only contains the Audio/Video Material, but also shows archived metadata. When the DVD is retrieved from the archive, it will play automatically, showing all the information on the disk.

Internal Service

An internal service to allow users to create their own required discs, will save considerable amounts of time to your internal staff. And makes their life a lot easier!

Speaker Service

Create a professional looking CD/DVD for each speaker, immediately after a conference and hand it over as thanking gift: A nice gesture and professional presentation of your organization
