Professional Conference Recording
The best solution: easy, efficient and affordable

ARBOR MEDIA
BROADCAST & CONFERENCE APPLICATIONS

LogDepot SOLO:

recording and monitoring audio and video made easy and affordable

LogDepot SOLO is a single system for recording, archiving, retrieving and publishing audio and video. Highly sophisticated, easy-to-use and especially adapted to digitally capturing conference, board room or council meetings. LogDepot SOLO is installed on a dedicated PC. With the help of the web-based graphical interface users can simply click on the URL's and start using the system.
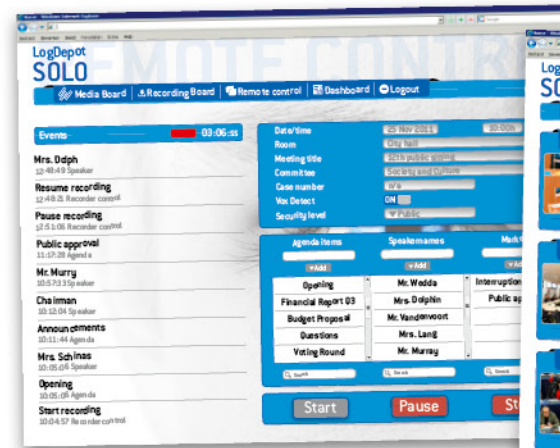

LogDepot SOLO's highlights:

- Full automatic, web-based recording and streaming of conference meetings in a single box

- Easy-to-use and intuitive user interface for browsing, viewing and downloading

- Annotate meetings with speaker names, agenda items and other metadata

- Integration with microphone systems such as TELEVIC, Bosch DCN and others

- Fast and easy publication to the internet and other platforms

- Recorder in Windows media format, and simultaneously in MPEG2 or MPEG4; Audio Only versions available

- Interfacing with Control Automation Systems such as Crestron, AMX and Extron

- Single and Multi channel available

LogDepot SOLO: fo

Prepare meeting

Step 1: preparing

Prepare your (conference) meeting by uploading or entering meeting date, time, room, title, agenda and/or other supplementary data into the Remote Control Dashboard.

# ur easy, web-based steps from recording to publishing.

Record meeting

Review

Publish

Step 2:
recording

Step 3:
reviewing

Step 4:
publishing and viewing

With the help of the Remote Control Dashboard start recording conference sessions. Every time you push the Pause or Stop button an individual session is digitally captured and saved. Add speaker names, agenda items or manual annotations if desired. LogDepot SOLO offers easy integration with several Control Automation Systems and can record in proxy format and in high quality.

After recording, review the meeting and prepare for publishing by correcting possible errors and fine-tuning data. The Media Board combines the audio/video feeds with metadata from microphone systems (Televic, Bosch DCN and others), room control systems (Creston, AMX and others) and manual annotations in one user-friendly overview. Searching and exporting is enhanced by features such as 'thumbnail viewing', cue-marking options and simple download facilities.

Publish the recorded material to a website, an internal network/portal or a long term archive, using the Media Board. Use the Player to watch and listen to recorded sessions. Browsing through the material and searching for specific items and/or fragments is made easy by the metadata information.
